

WHO ARE WE ?

We are a joint venture between SNCF VOYAGEURS and CERTIFER to provide NoBo and ISA Service synchronised with Tests Lab activities. Our independent ERTMS laboratory #LEF is ISO 17025 accredited. Our experience as a railway operator is recognised by the major players in railway signalling. The laboratory develops key solutions to support the certification and qualification of railway components and systems. The laboratory carries out its own R&D for designing new ERTMS tools.

For 20 years, EURAILTEST has been a French EIG (Economic Interest Grouping) created by SNCF Voyageurs, SNCF Réseau and RATP to market their expertise in testing heavy and urban rail systems and sub-systems. EURAILTEST is always dedicated to providing you with the best possible response to your needs, by bringing together the different skills and knowledge of our experts. The quality systems established in our various laboratories and their recognitions (EN 17025 COFRAC, EBA, RINA, CERTIFER, etc.) are your external guarantee of success for your projects, whether in France or abroad.
